

*Theseus Treatment Agency*

**An unrivalled Caseload  
Management System  
for Treatment Agencies  
and Healthcare teams**

## **What is Theseus TA?**

***Theseus TA is a product that helps drug treatment teams to enter data more efficiently, manage caseloads more effectively and report upon team efficacy more accurately***

Theseus TA has been developed with the case worker in mind. An easy to use solution that leads the user through all of the relevant forms, and with helpful prompts to ensure that accurate and timely information is collected.

Furthermore, Theseus TA helps to ensure that the treatment objectives are met by highlighting any dates and obligations that would compromise achievement of increasingly demanding targets. Using Theseus TA means that paperwork is practically eliminated, data entry time is kept to an absolute minimum, and that achievement of targets is maximised. Ultimately this means that the client is treated with a minimum of time spent filling in forms, and the ensuing good results are accurately recorded and reported.

# Theseus Treatment Agency

## Features
